                                  This sequence represents a novel barley alpha-glucosidase protein. Recombinant alpha-glucosidase can be used to increase the rate of starch grain hydrolysis when used together with alpha-amylase or can supplement glucoamylase in industrial starch hydrolysis systems. Useful DNA sequence characteristics from this enzyme can be identified which can be used as hybridisation probes for identifying germplasm with high levels of efficient hydrolytic enzymes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       720
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                780

A transformant containing the recombinant vector can be used for preparing alpha-glucosidase by culturing the transformant and isolating alpha-glucosidase from the culture. This sequence represents a buckwheat alpha-glucosidase protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      7 LLLCLCLCLFAPRLCS---SKEBGPLAA---RTVLAVAVTMEGALRAEAATGGRSST--G

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             406 FPDFMGHPAAAEFWAREISLFRRTIPVDGLWIDMNEISNFYN--PEPMNALDDPPYRINND 463
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to a recombinant vector containing alpha-glucosidase gene derived from buckwheat. A transformant containing the recombinant vector can be used for preparing alpha-glucosidase by culturing the transformant and isolating alpha-glucosidase from the culture. This sequence represents a buckwheat alpha-glucosidase protein.

This invention describes a novel potato alpha-glucosidase (I). (I) is used to produce transgenic plants (or plant to bacterial cells) that produce starch with modified degrees of branching, amylose/amylopectin ratio, phosphate content, starch granule size and/or sidechain structure, and thus altered physical and chemical properties. This starch is used for all usual applications, particularly in preparation of foods, packaging materials and disposable articles, but also for hydrolysis to glucose (for manufacture of other chemicals or for fermentation), in paper/pulp manufacture; in adhesives; for treating textiles; for soil stabilization, as wetting agent in plant protection and fertilizer compositions; as binding agent in plant protection and fertilizer compositions; as binding agent in plant protection and cosmetics; as additive for rubber, building materials, leather and in casting; as floculant for soil or coal slutries; and in polyment as simple filler or reactive component, e.g. in polywrethane foams. Modified starch produced using plants that contain (I) are easily hydrolyzed, reducing the requirement for expensive enzymes. This sequence represents the popure of the requirement for expensive enzymes. This sequence represents the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                284 YWSFGFHQCRYGYLNVSDLERVVARYAKARIPLEVMMTDIDYMDGFKDFTLDRVNFTAAE 343

The protein preferably catalyses the glucose transfer of an alpha-1 right arrow 3 bond or the glucose transfer of an alpha-1 right arrow 4 bond to a sugar receptor by reacting with a substrate selected from starch and its decomposition

The present invention describes a method for examining ischaemic conditions, comprising measuring the expression levels of particular genes (I) in a test sample or determining the expression profile of a gene group in the sample comprising genes selected from (I). The method is useful for examining the ischaemic condition (e.g. compression to ischaemia, occlusive ischaemia or vasospastic ischaemia) by measuring expression levels of particular genes (ABI99202 to ABI9912, encoding the protein sequences in ABB57020 to ABB57314) or by determining the expression profile of a gene group comprising these genes are undicator when screening for ischaemic condition-improving drugs or therapeutics for ischaemic diseases. ABI99913 and ABI99914

The protein requence of ischaemic condition-improving drugs or therapeutics for ischaemic condition related sequence, which are used in the exemplification of the present invention.
                                                                                                                                                            Examining the ischemic condition (e.g. occlusive ischemia) by measuring expression levels of particular genes defined in the specification or by determining the expression profile of a gene group comprising these

RESULT 12 AAW74090 ID AAW7

Aspergillus oryzae contains two novel enhancer elements: one (designated "enhancer-B") corresponds to the consensus sequence CGGNNATTA and the other (designated "enhancer-C") is of sequence CCGNNATTA and the other (designated "enhancer-C") is of sequence CCAATCAGCGT. By inserting at least one of the enhancer elements into a promoter region which is functional in fungi, the activity of the promoter is enhanced Using such improved promoters, a gene of interest can be expressed efficiently in transformed fungi. The present sequence is encoded by the agdA gene.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               This sequence is the human hSI protein. The invention relates to purified proteins (I) that bind specifically to at least one of the gastro-intestinal (GI) tract receptors human intestinal opeptide-associated transporter (HPTI), hEPETI, D2H and human beptide-associated transporter (HPTI), hEPETI, D2H and human concerisomaltase complex (hSI). (I) provide active transport of therapeutic agents through human and animal GI tissue (into the blood) for in vivo delivery, particularly for treatment or prevention of hypertension, diabetes, osteoporosis, haemophilia, anaemia, cancer, insulin or leuprolide, but many other suitable therapeutic agents are disclosed, including genes or inhibitory nucleic acid, imaging agents and antibodies (I) are: (I) to death of specified receptors in a sample (II) are: (I) to death of (II) tract. Other uses of (II) are: (I) to death of (II) tract. Other uses of (II) are used to that bind (II). Immunogenic analogues or derivatives of (II) are used to raise antibodies and in immunoassays. The antibodies are used to locate, detect and measure (II), e.g. for imaging monitoring treatment, tissue analysis etc., also for peptide purification and immobilisation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    23;

The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating dischers involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations

Expression of these markers indicates possible presence of the specified cancer cells. The method is used to diagnose (or monitor)
                                                                                                                                                                                                                                                                                                                                                                                                                                              metastatic colorectal cancer or primary and/or metastatic sconach or oesophageal cancer cells, also to confirm identification of such cells. These cancers can be treated by administration of an SI ligand and (optionally conjugated) cytostatic agent or radioimaged by administering a conjugate of the SI ligand and detectable agent. The present sequence
                                                                                                                                                                          In vitro screening for specific gastrointestinal cancer cells, useful for diagnosis, by detecting expression of the markers SI, CDX1 or CDX2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              59 DVQRLAVYASLETDSRLRVRITDADHPRWEVPQDIIPR---PAPGDVLHDAPPASSAPLQ

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present sequence represents Endomyces fibuliger (also called Saccharomycopsis fibuligera) glucoamylase GLAZ. The invention describes the recombinant GLAZ enzyme, which is useful for hydrolysing carbohydrate-containing materials, especially materials containing rice carbohydrates. The glucoamylase is used to produce glucose and alcohol from starch containing raw materials. GLAZ is useful for hydrolysing carbohydrate containing materials e.g. mixtures of a source of proteins and a source of carbohydrates, especially a mixture of leguminous plant or of a cooked oleaginous plant and of a cooked or roasted cereal source e.g. a mixture of soya or cooked beans and of cooked or roasted wheat or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        78 VITTAKGLIGILKINEATNIYGYDFDYLNLSV--EYQSDDRLNVHIEPVDTDNVFILPES
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    93 IIPRPAPGDVLHDAPPASSAPLQGRVLSPAGSDLVLTVHASPFRFTVSRRSTGDTLFDTA
